

From text input our AI tool explores the world-wide patent collections. Instantly you get the most relevant documents, also pointing out and highlighting the relevant passages to read.

AI FOR SMARTER SEARCHING

BE AN AI ENHANCED SEARCHER

The IPscreeener AI searches an input text in iterative steps to deliver results with high accuracy and precision. This includes learning from user behavior, pointing out relevant text paragraphs and highlighting key terms. You may at any time take control and focus strategy with classes, dates etc.

MEASURED SEARCH PERFORMANCE

We are 100% transparent about the quality IPscreeener deliver. You will always get analytics and performance scores for your technical domain. If interested, we may even deliver an analysis of your company patent portfolio, a specific technical domain or for a set of competitors or clients.

INTEGRATED INNOVATION PROCESS

Use IPscreeener either as a WEB tool or as integrated via APIs to your existing innovation platform. Your cases will be presented with a prior art screening automatically. Of course, it is possible to get customized reports. Automatically generated from users' actions and comments.

KEY FEATURES

- > Integrated reports on-the-fly
- > Easy text-based screening
- > Assisted patent reading
- > Automatic highlighting
- > Self-learning searches
